CNN

OVERVIEW

The study was conducted for CNN via telephone by SSRS, an independent research company. Interviews were conducted from July 18 to July 24, 2020 among a sample of **1,003** respondents who live in Michigan. The landline total respondents were **350** and there were **653** cell phone respondents. The margin of sampling error for total respondents is +/-3.6 at the 95% confidence level. The design effect is 1.37. For results among the 927 respondents who are registered to vote the margin of sampling error is +/-3.8. More information about SSRS can be obtained by visiting www.ssrs.com.

Question text noted in parentheses was rotated or randomized. Values less than 0.5 percent are indicated by an asterisk (*).

NOTE ABOUT CROSSTABS

Interviews were conducted among a representative sample of the adult population, age 18 or older, of Michigan. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

MORE ON METHODOLOGY

A total of **1,003** adults who live in Michigan were interviewed by telephone by live interviewers calling both landline and cell phones. Interviews were conducted in English and Spanish. Among the entire sample, 29% described themselves as Democrats, 25% described themselves as Republicans, and 46% described themselves as independents or members of another party.

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect Census figures for gender, race, age, education, state region, and telephone usage.

Results for the full sample have a margin of sampling error of +/- 3.6 percentage points. For the subset of 927 respondents who are registered to vote, it is +/- 3.8 percentage points.

Interviews were conducted among a representative sample of the adult population, age 18 or older, of Michigan. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.
